Shooting Stability

The scope mount is vital for the shooting performance, because it makes one entity out of rifle and scope.

Therefore, all components of the mount need to be of optimum mechanical stability, as between 300 and 600 kilogrammes tear at the scope when a shot is fired, even in case of a medium-sized rifle and scope. And only complete absence of tension in the mount will ensure a constant centre point.

EAW scope mounts meet all these requirements thanks to premium materials, high-precision manufacturing, and wellengineered constructions with many possibilities for adjustment, allowing for an easy mounting. These reliable and convenient products are up to any challenge.

Using EAW pivot mounts or certain EAW slide-on or roll-off mounts, the shooter may take the scope off the rifle and put it on again at will without any loss of zero. Modular secondary mounts make it possible to fit one rifle with several scopes or sights.

EAW. The company.

For 100 years now, EAW have focused on the requirements of their clients. The customer-orientated advisory service and after-sales service are given priority.

And for this reason we are eager to not only put highest precision and quality into the technical realization of our mounts, but to also continuously improve our well-engineered mount programme by further developing our products and introducing new ones.

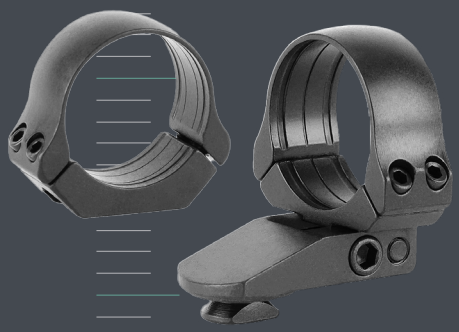

Innovation, which means following new paths, therefore has always motivated EAW and has been an essential factor in the company's philosophy. The best example is the great number of products patented in Germany and abroad and the products with registered design that have found their way into the EAW mount programme.

Innovation as an obligation

The best example of innovation from EAW is the design of the EAW pivot mount.

Often copied by other manufacturers even today, this type of mount began sweeping the market in 1970. Users of this type of mount can save money in their initial purchase and for later conversions. EAW pivot mounts deliver the best possible shooting performance.

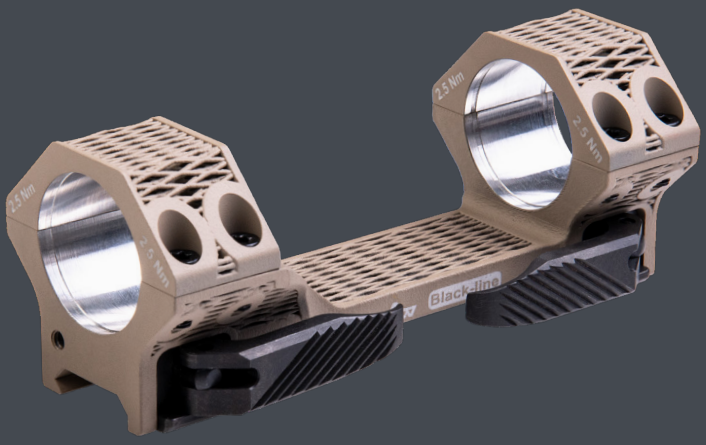

Ring shape with 2/3 division

EAW developed this milestone back in the 1960s as well.

Many manufacturers have adopted the design, making it the world's most copied ring shape. In all of our new developments, we have always worked to ensure our products work together as well as possible.

Because of this, EAW mounts don't become outdated. In most cases, currently produced parts can be combined with older models. Marksmen, hunters and gunsmiths appreciate this advantage, and know they are always on the safe side with EAW.

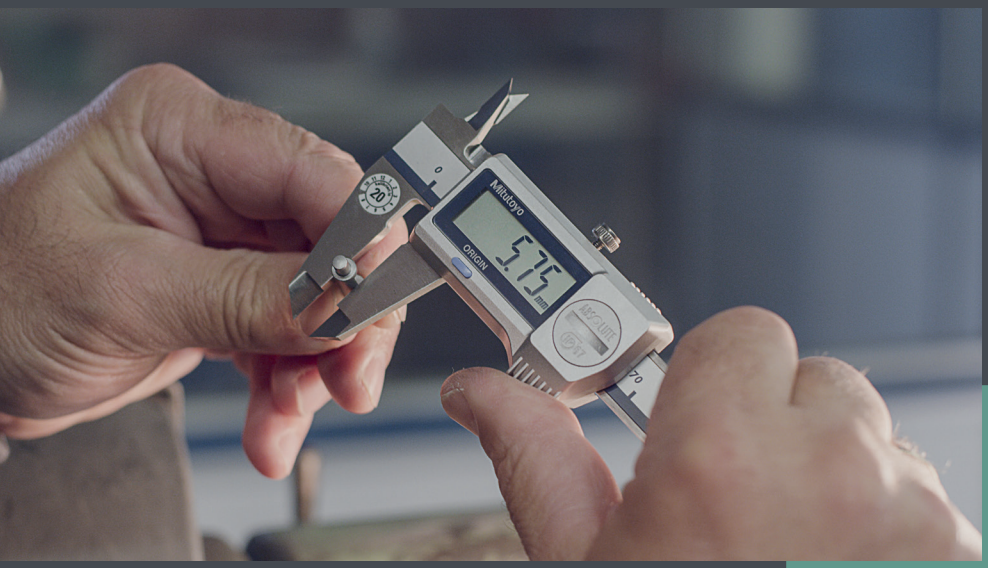

Redefining Scope Mounts

EAW released an ultralight scope mount produced from additive manufacturing (3D-Print) – a worlds first.

The new aluminium mount, produced by a laser in an innovative additive manufacturing process. It is not only impressive because of its special appearance and enormous rigidity, but above all because of the revolutionary weight saving of approx. 30-40% compared with conventional mounts.

The construction method results in a unique design. Personalized coatings as per request guarantee numerous potential looks.

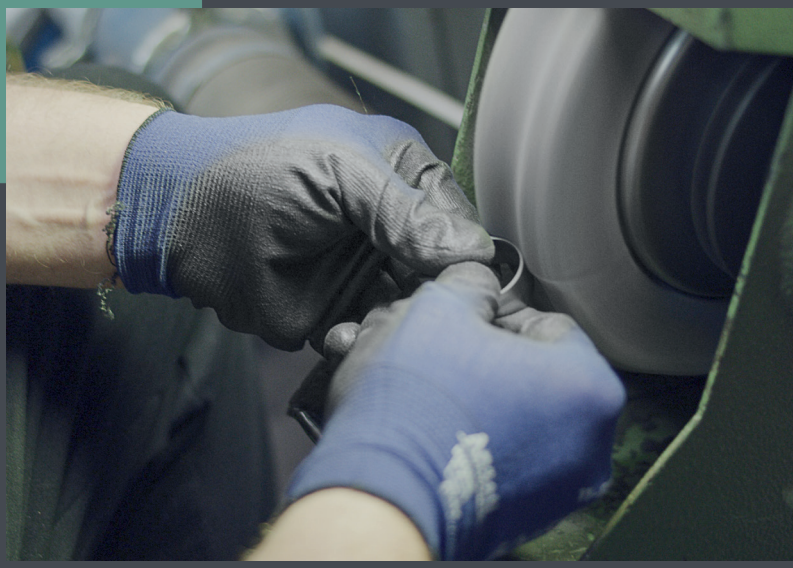

Quality: Made in Germany

EAW combines modern technology with traditional German craftsmanship.

Despite offering the latest machinery and ongoing technical development, EAW continues to value traditional craftsmanship. This is how we are able to offer a fine-tuned combination of outstanding technical precision and experienced German craftsmanship. This unique combination is essential for delivering the unmatched high precision and production quality EAW is famous for.

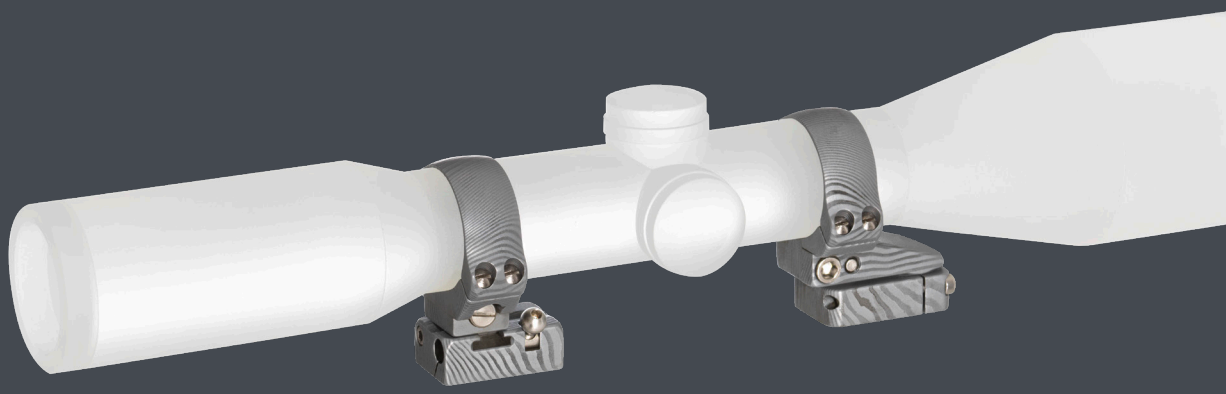

Certification

Our current DEKRA certification in accordance with ISO: 9001:2015 verifies the outstanding level of customer satisfaction EAW offers, with customer relationships based on long-term trust, years of experience and competence in machining, and an excellent, family-oriented company atmosphere.

30 Years' Guarantee

We believe so strongly in the quality of our "made in Germany" products that we offer a 30 year warranty on all mounts and mount parts (according to our warranty conditions).
This is what our brand logo stands for that has been lasered into every mount.

Looking for something special?

We are specialized in custom works according to the needs of ou r customers.
Just like this custom pivot mount, handcrafted from 160 layers of damask steel.
Come forwards and inspire us with your ideas!
Those who favour stainless rifles can have all mounts and parts furnished with a high-quality nickel coating (“stainless look”) at an extra charge.

Responsibility for people and the environment

We join forces with hunters, who are dedicated to the preservation of nature, by providing durable products that may be complemented without any problem even decades after purchase.

It is understood thatwe do, first and foremost to the benefit of our staff, see to best production conditions, use environmentally sound materials and utilities, and have all wastes recycled or disposed of with reasonable care.

EAW pivot mounts.
The original.

- General Info
- Mounting Instructions
- Reference Numbers

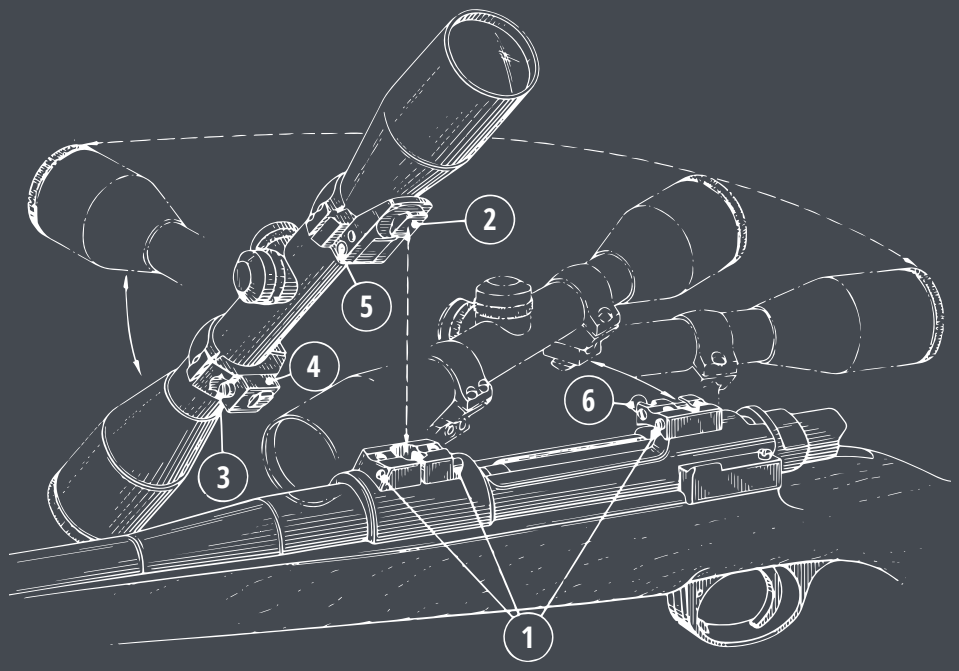

EAW pivot mounts. The original.

EAW developed and launched the pivot mount over 50 years ago. This mount offers many advantages that make it one of the most popular types of mount available, which is why other manufacturers have copied it over time. EAW pivot mounts and pivot mounts for dovetails are designed to ensure absolute accuracy even under the toughest conditions.

Advantages

- Mount height and eye relief freely configurable
- Easily attach and remove scope mount with one hand, since the rear foot snaps automatically into the lock on our pivot mounts
- Front foot and rear foot fit adjustable
- Front foot has a large shear cross-section (approx. 3x that of claw mount) that prevents tilting and guarantees shooting stability even with large calibres
- Horizontal adjustment with EAW pull-down support
- Vertical adjustment by easily exchanging the rear foot sub-base in stages of 0.5 mm
- Vertical tolerance compensation if there are weapon tolerances thanks to adjustable front foot
- Consistent point of impact because the scope is tension-free, even if attached and removed multiple times
- Ideal for second scopes and aiming devices

Function

1. Front foot and rear foot fit adjustable

2. Large front foot cross section

3. Horizontal adjustment with EAW pull-down support

4. Vertical adjustment by exchanging the rear foot sub-base in stages of plus or minus 0.5 mm

5. Vertical tolerance compensation if there are weapon or mount tolerances thanks to adjustable front foot

6. Scope mount easily removable with one hand

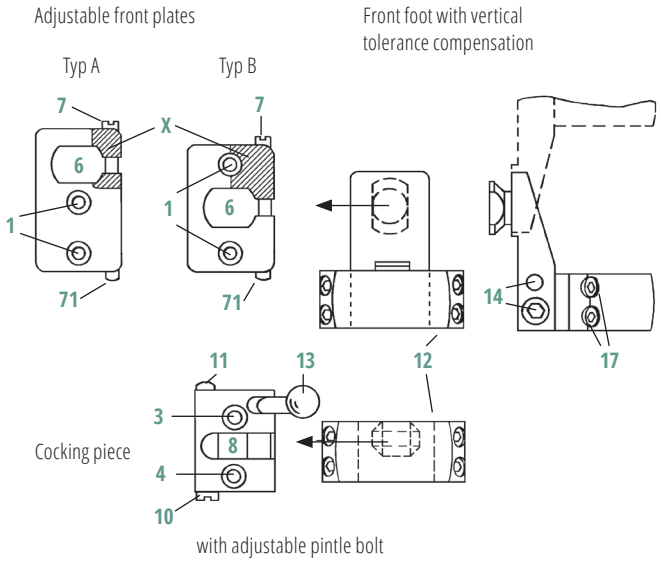

EAW Blue Line pivot mounts

- The entry level choice for the world of EAW pivot mounts
- Tension-free with repeat precision
- Matte black
- 100% compatible with our EAW pivot mounts
- Fully mechanical manufacturing

Mounting instructions for EAW pivot mounts

Thank you for purchasing an EAW quality mount. To keep your customers perfectly satisfied in the future, please carefully read and respect these mounting instructions. Since they include valuable adjustment details, please pass them on to your customer together with the weapon.Thank you.

A Carefully remove the burnishing residue from all mounting components. Remove any burnishing from the horizontal contact face (ring mount) of the pivot foot (the ideal agent is the polisher, EAW art. no. 1922300). Remove the burnishing and grease from the bonding faces of both the plates and the weapon and preliminarily mount and align the plates (turn front plate by 180° if necessary).

B Before inserting the pivot foot in the front plate, spread some (viscous) oil over the corresponding slide faces (and periodically repeat later on). Insert the front foot in (Item 6), then turn the adjusting screw (7) until the front foot fits and secure the front foot by tightening the lock screw (71). If your rifle has unslotted plates, sand down the ring mount on the front plate until you can fit in the front foot. Unscrew the pivot screws (14).Remove the burnishing from the screw head contact faces and spread lubricant (oil or grease, e.g. Molykote) over the pivot screws. Slightly tighten the pivot screws.

C Remove both plates again, carefully remove all grease from the con tact faces again and screw back in. Relieve the pressure on the screws (1) by gluing or soldering in the foot plate. Do not put glue on the hatched surface "X" of the front plate – see drawing.

D Insert the rear foot in (8) such that its bottom side is parallel with the plate's top side and the T-stud in groove (8) is centred in axial direction. In this position, tip up the cocking bolt handle (13) by about 70° and arrest-by turning the stop latch (10) left (anticlockwise).

E Remove the ring top parts (12), insert and roughly align the sight, remove again and remove the grease from the clamping and inner faces of the rings. Remove the burnishing from and apply adhesive to the bottom ring halves, reinsert the sight and properly align while screwing it down. A good aid for this step is EAW's alignment device (EAW art. no. 1922100). Do not overtighten the screws to avoid deforming the scope tube (max. 200 Ncm).

F Tighten the pivot screws (14), slowly turn back the stop latch (10) unti the cocking bolt handle (13) in its downward movement stops about 1 mm before its end position. Keep the stop

G Pivot the sight in and out several times to loosen up the base fits;while doing so, recheck the fit of the front base fits, use the adjustment screw (7) to accurately align the front base and secure using the lock screw (71). Check that the sight moves without much force or hindrance and that you can open the cock for pivoting out using your right index finger. When pivoting in the rear foot, the cock must automatically open and close. In case the lever (13) slips all the way down, readjust the stop latch (10) by turning it anticlockwise.

H Check that all screws have been tightened properly and apply a little grease to the joint. Allow the bonds to cure properly. Fire a couple of test rounds and check whether the lever (13) still stops 0.5–1 mm before its end position. Readjust as necessary.

Please note:
To ensure that the EAW mount works properly, check that the sight pivots in without much force. The rear foot should rapidly pivot into the pintle cocking piece; mind that opposed to a claw mount, the technology of EAW's pintle bolt will leave a minor light gap between the rear foot and the lock surface. Check that there is absolutely no strain on the mount. This is the only way to ensure a satisfactory firing performance.

Polisher
Order-Nr. Standard: 1922300
Order-Nr. XS: 1922400

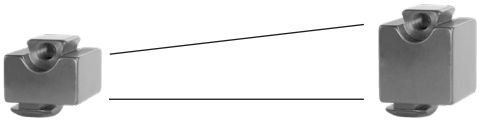

For easy and accurate polishing of the ring mount on the pivot mount's front foot. The polisher is particularly ideal for removing any burnishing or if non-adjustable front plates are used as is the case in many break-barrel rifles, for example. To fit in a second mount: adjust the front plate to accepting the easier moving front foot. Now use the polisher on the second foot until it perfectly fits into the front plate.

Attention – Important note!
In older rifles in particular (e.g. Mauser 98), the height differences between the case head and bridge vary greatly. This may ask for compensating the height between the front and rear foot, which EAW's pivot mount provides an extremely simple means for through the vertical tolerance compensation invented by EAW. All you need to do is to replace the rear foot bottom part (RFB).

Benefits:

- Almost effortless
- No time-consuming rework
- Accuracy of fit guaranteed
- Still no strain on the mount
- 30-year warranty is retained

Recommended value for replacing the RFB: Every 0.5 mm change in RFB height moves the hitting point by about 0.5 m at 100 m distance.

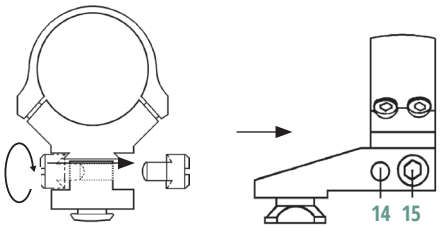

Available rear foot bottom part heights range from 3.5 to 15 mm at steps of 0.5 mm.

Instructions:
To remove the RFB, unscrew one of the supporting screws and use the other to push the RFB to one side as far as it will go. Now put a piece of wood or similar material underneath and fully remove the RFB.

Reverse these steps to install the new bottom part. Remember to remove the burnishing from the mating faces first.

To readjust the mount, first loosen the pivot screws (14 + 15) (see pivot mount instructions) and accurately adjust the mount according to pivot mount instructions.

It will take you just a few minutes to restore the exact fit while keeping 100% of the original precision..

Note on the XS model

You opted for this reinforced model because you are wishing to use a huge calibre, a heavy sight or a combination of the two. Only a perfect link between the mount, the rifle and the sight will ensure sufficient stability. This requires you to::

1. Carefully glue in (or solder) the front plate. Best practice is to completely remove the burnishing layer from the bonding faces on both the rifle and the front plate. Then remove all grease from these surfaces and avoid touching them afterwards..

2. For bonding, only use 2-component adhesives and handle them according to manufacturer instructions. In order to achieve a maximum final rigidity, you should heat the front plate to 180 °C if you are using "UHU-PLUS" or equivalent adhesive.

   Note:
   Assuming you are intending to use the rifle in Africa, for example, we recommend applying a "hot-melt adhesive" because it will not soften at temperatures of 70 °C or more inside a vehicle as "UHU-PLUS" will temporarily.

3. Glue down the entire front ring surface to prevent the sight from slipping inside the front ring without warping the sight (see point 1 above).

4. Tighten the 3 pivot screws to 5 Nm. Tightest clamping is achieved by removing the burnishing from the contact faces of both the screw head and the pivot joint.

Note:
Maximum rigidity is obtained by tightening and loosening these screws several times. Wrongly tightening these screws is the most frequent single source of failure. It will cause the rear foot to lift and damage the cocking piece housing and/or the T-stud will come off the RFB. This is not covered by the warranty! By design, only the front foot should have to absorb the recoil from firing.

Although we manufacture these high-quality mounts, we have no say in whether customers will actually install them correctly. We recommend trusting a gunsmith with the installation. We are sorry to say that we will not accept any liability for improper execution.

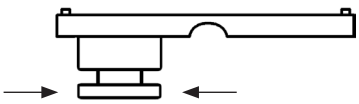

Warning:
f you have an extra-long rail that has been extended towards the back, you run a potential risk of injury. We will never know what you will actually mount on this rail. You therefore agree to using the product at your own risk and without any title to claims for damages whatsoever. We disclaim any and all warranty claims for deformation or breakage. By mounting this rail, you are also accepting these terms.

Red dot sight adapter

for EAW-Pivot Mountsn – EAW-Nr. 106010

Please note:
The T-stud of the Docter sight adapter is slightly oversized after manufacture. Please carefully draw a file across the marked surfaces several times until the adapter slides into the cocking piece without any play.

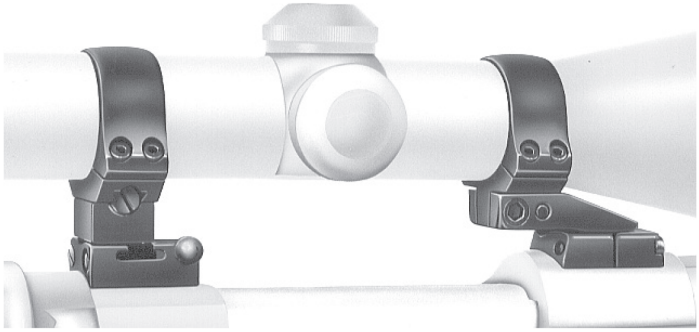

EAW-Nr. 106010

for Sauer S 303 – EAW-Nr. 4030300110

Please note::
The adapter installs on the rear prism of the mount only. Only here will the transverse screw fit into the transverse groove because the transverse grooves of the front prism are slightly narrower.

EAW-Nr. 4030300110

Standard
Width of Ring 15 mm

Magnum
Width of Ring 20 mm
recommended from 8x57 / 4100 J

XS
Width of Ring 20 mm, stronger Pivot 3 Hinge Screws
recommend from 300 Win. / Mag 5000 J

EAW Pivot Mounts with dovetails

- General Info
- Conversion from a Claw Mount to a Pivot Mount with dovetails
- Mounting Instructions
- Reference Numbers

EAW Pivot mounts with dovetails

EAW developed the pivot mounts with dovetails specifically for break action firearms. The mount attachment is not on the weapon, but rather on the scope mount. This ensures a low mount height.

Advantages

- Stable, reliable design for optimal repeat precision when re-attaching the scope mount (the DEVA proved back in 1979 that this type of mount withstands the toughest conditions: Even after 10,000 shots, the mount retained 100% precision with repeatedly attaching and removing the scope)
- Lowest arrangement of the mounting plates to the rail height allows for aiming using the iron sight
- Exchangeable rear foot top and sub-base in different heights
- Rifles with claw mounts can be converted to a pivot mount with dovetail, with only minor changes necessary to the weapon itself
- Parts available for a second scope
- Rear foot with support
- Elegant appearance

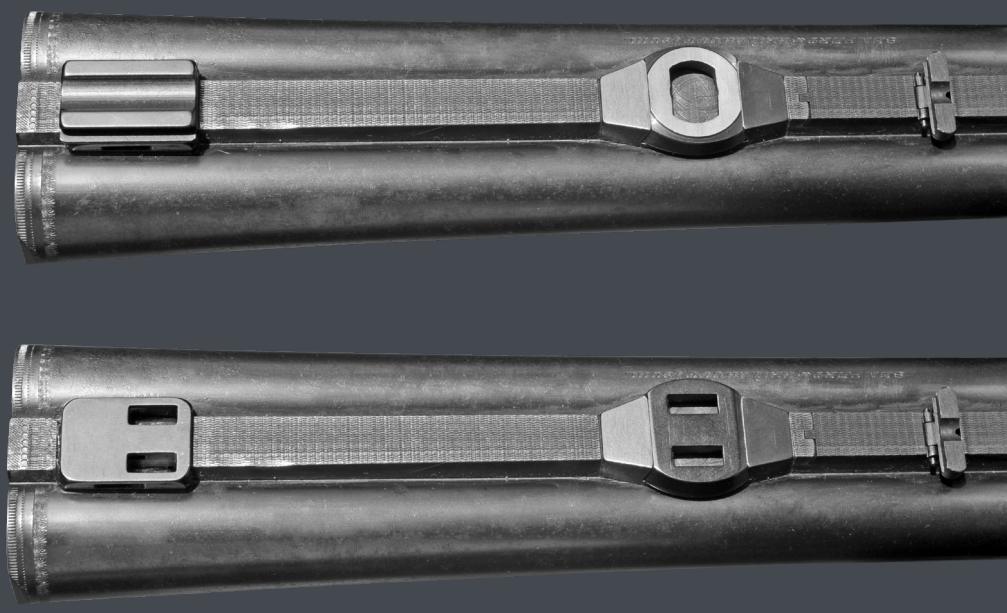

Conversion from a Claw Mount to a Pivot Mount with dovetails

As great as a claw mount is, it can pose difficulties if the user wants to add a new rifle scope or second scope.

In principle, it should be possible to install the new rifle scope with an additional claw mount. However, there are some reasons not to do so: The necessary adjustments are very extensive, require a high level of professionalism and significant experience. Changes to the rifle itself will be unavoidable.

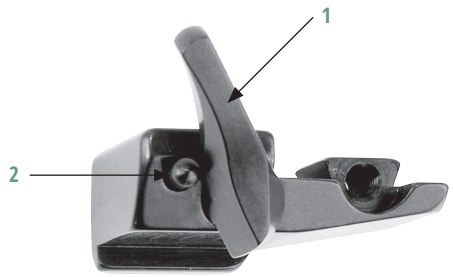

EAW offers solutions that make it simple and economical to convert from a claw mount to an EAW lever pivot mount.

Thanks to the large number of top components EAW offers, a lever pivot mount can be used to mount and interchange any aiming device on a mount base, without having to re-focus.

Mounting instructions for lever-operated EAW pivot mounts with dovetails

Please take heed of the user guide to ensure a reliable operation of this mount.

Function

Opening::
Push in the locking bolt (Item 2) and turn the lever (Item 1) all the way down (anticlockwise).

Closing:
Turn the lever all the way up (clockwise) until the locking bolt automatically snaps out.

Installation

Adjusting the rear foot fit and installing the rear foot:
Use a pin spanner (AF 1.5) to unscrew the locking screw from the threaded bushing (Item 3.2). Turn the lever (Item 1) down, place the RFB on the rear prism and align until parallel to the prism. Turn the lever (Item 1) up until the locking bolt (Item 2) automatically snaps out.

Keep turning the locking screw (M 018) until the RFB fits tightly. Then tighten the locking screw (Item 3.2).

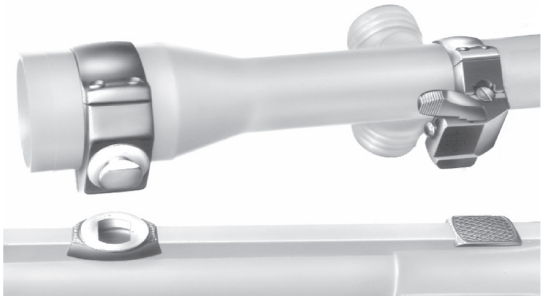

Check that the lever will open and close properly. To do so, push the locking bolt (Item 2) in and the lever (Item 1) down. Turn the lever up until the locking bolt automatically snaps out.

Check that the RFB is parallel to the prism and firmly attached. Repeat the setup procedure if necessary.

Note:
At that position, the rear foot will not have to absorb any recoil. The recoil is fully absorbed by the front foot.

Spare Parts

Item No.	Denomination	EAW Art. No.
1	Pivot mount lever	204 001
2	Locking pin	204 002
3	Threaded bushing	M018

EAW claw mounts

- General Info
- Reference Numbers

EAW claw mounts

Today, EAW manufactures Suhler and Ferlacher type claw mounts with an improved technical design that can be installed quickly.

We offer a broad selection of beautiful, elegant claw mounts in our catalogue. Historical firearms, in particular, can gain value by using this type of mount. The lateral offset rear foot and lock for the Mannlicher Schönauer GK is just one example. EAW still manufactures Suhler claw mounts for many current firearm models as well.

Slide-on/roll-off mounts

The scope can be removed and attached in this model series as well, which is available as either a one or two-piece design.

Of course, this economical mount is still manufactured with the same precision as our top-of-the-range model, the pivot mount.

Specifically designed for air rifles and small calibre shotguns, but also suitable for all common rifles with integrated cylindrical or conical mount dovetails and with dovetails plates for the most commonly available repeating rifle. Of course, EAW also offers a broad range of Picatinny rails and associated roll-off mounts. Available for fixed installation or repeat precision with lever lock.

Advantages

- The economical solution, without sacrificing quality and precision
- Top-of-the-range models with pivot-mounted rings or prisms and side support
- Outstanding compensation for weapon tolerances
- Tension-free horizontal scope mounting, even after adjusting the windage
- Model-dependent height variability thanks to the popular EAW modular system

Custom designs

Side slide-on mount
Side slide-on mount based on the model of Paul Jaegers. Allows for precise repeatable installation of multiple scope mounts with free view of notch and bead sights. A beautiful solution fit for the revolutionary character of a historical weapon.

- Windage adjustment in the rear foot
- For 26mm, 27mm, 30mm ring scopes , rail lenses with 70°rail and Picatinny top section
- Up to 50mm objective lens

EAW Blue Line roll-off mounts

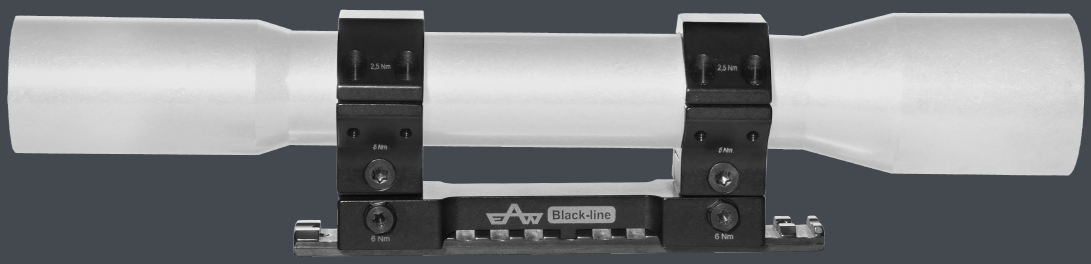

- Single-component mount made of high-quality aluminium
- Steel jaws/bolt/recoil stop
- Optionally available with 2 connectors for installing additional optics
- The EAW solution for your mount at an attractive price-performance ratio

EAW Blue Line block mount

- Now available with lever
- Single-component mount made of high-quality aluminium
- Hard anodised surface with 50µ layer thickness guarantees added durability
- Outstanding design: minimal, beautiful, lightweight 92g and easy to mount on rail glass
- Extensively tested by the DEVA

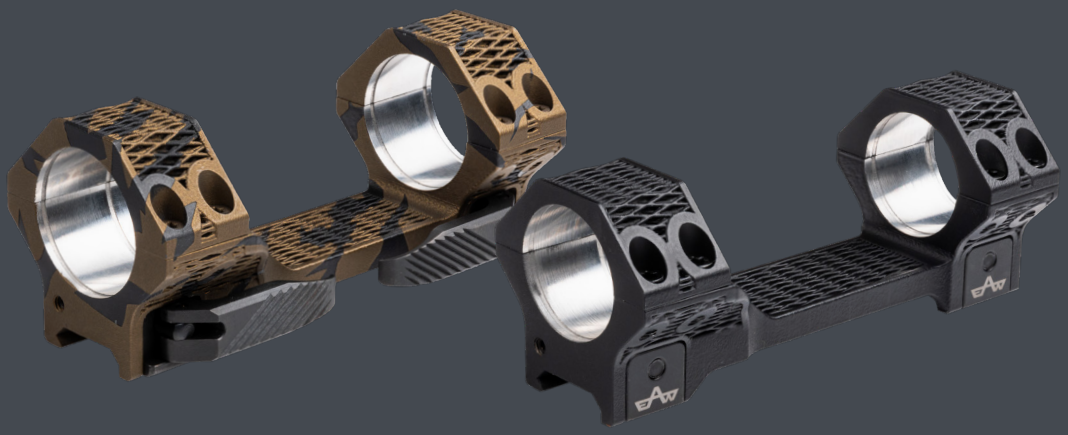

EAW Black Line

The EAW category for official use and long range marksmen
Discover our mount with variable tilt and solutions for tactical applications.

- Single-component roll-off mount with variable tilt from 0-70 MOA
- Available for 30mm, 34mm and 36mm ring scopes diameter
- 22mm height
- Successfully used by authorities

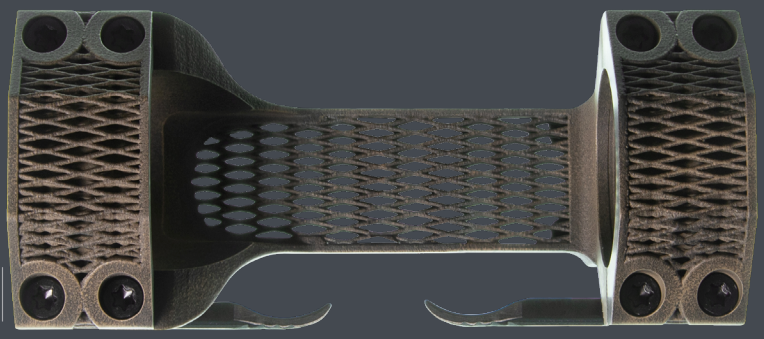

EAW Ultralight 3D scope mount

The first scope mount on the market produced from additive manufacturing (3D print).
An exclusive worlds first by EAW.

The new aluminium mount, produced by a laser in an innovative additive manufacturing process. It is not only impressive because of its special appearance and enormous rigidity, but above all because of the revolutionary weight saving of approx. 30-40% compared with conventional mounts.

Advantages

- Manufactured using the worldwide unique laser-based additive manufacturing process
- Extremely lightweight aluminium block mount which saves 30-40 % in weight against comparable mounts
- Post-processing to perfection on our CNC mills
- Novel design through innovative lattice construction
- Available in diameters of 30 and 34 mm, in two heights each
- Available in natural or black anodised aluminium
- Custom coating possible

DEVA

Ultralight, extremly durable.

To fullfill our company quality standards, the new design has been tested for durability at the DEVA institute in Germany.

The result:
Even when treated with the hardest of conditions (2000 shocks, 700g of force, 0.8ms/shock) the mount proofed to be absolutley flawless.

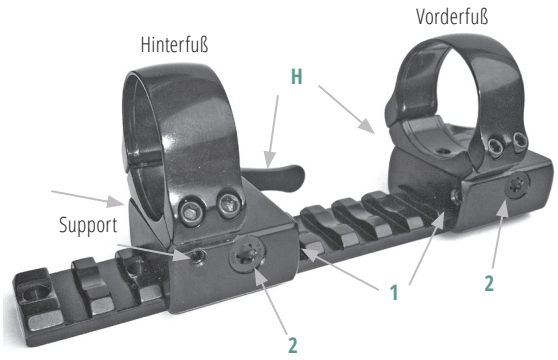

1. Mounting instructions for roll-off mounts with adjustable quick release clamp

For bolt action, automatic and break-barrel rifles equipped with Picatinny or Weaver rails.

Thank you for purchasing an EAW quality mount. We wish you the best of success, good luck and good hunting!

To keep you perfectly satisfied in the future, please carefully read and respect these mounting instructions. Since they include valuable adjustment details, please pass them on to your customer together with the weapon. Thank you.

This adjustable mount fits on any available Picatinny rails made to MIL Std. 1913 and featuring a groove at least 5 mm wide. In case your rifle does not have this type of rail, please browse our catalogue for your perfect pick – or-contact your gunsmith. Widen 4 mm grooves (Weaver rails) or fit in the stop.

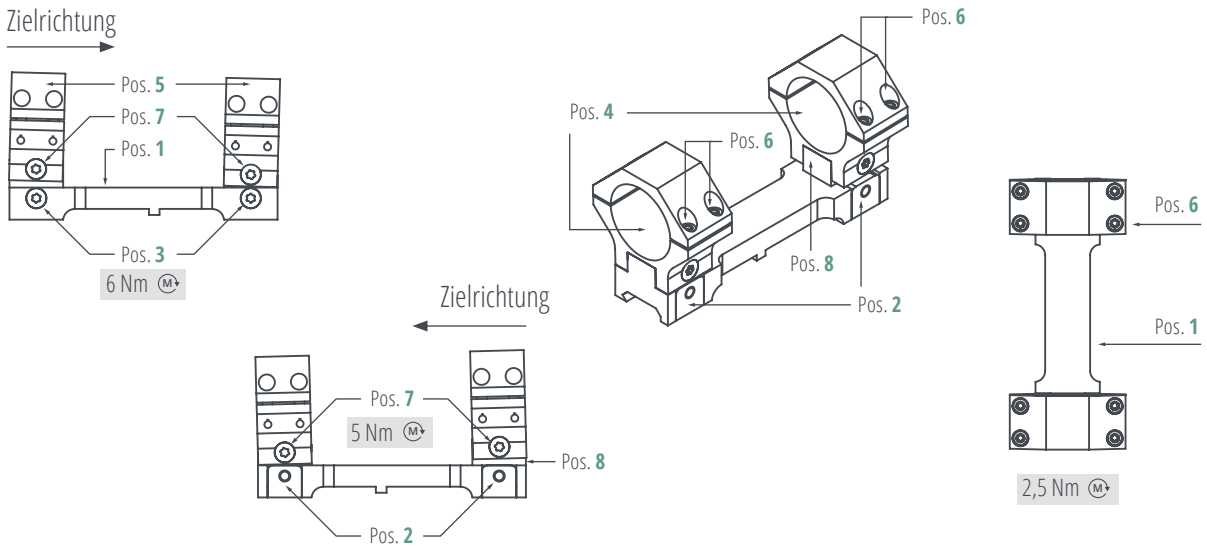

Adjusting the lever

1. To adjust the lever (H) use a 2 mm Allen key to unscrew the lock screw (1).
2. Using a 4 mm Allen key, turn the screw (2) to adjust the tension of the Locking Lever such that you have a noticeable resistance when moving it..
3. Once you have adjusted the lever, do not forget to properly tighten the lock screw (1).
4. Recheck the lever for correct operation.

The stop:
There is a 5 mm wide stop in the front foot. Since the milled section inside the rails can be up to 5.3 mm wide, we suggest pushing the mount forward until the stop makes contact. Then lock the mount in place.

Warning:
If your Picatinny rail has been extended towards the back, you run a potential risk of injury. We will never know what you will actually mount on this rail. You therefore agree to using the product at your own risk and without any title to claims for damages whatsoever. We disclaim any and all warranty claims for deformation or breakage. By mounting this rail, you are also accepting these terms.

2. Mounting instructions for Blackline mounts

Mounting instructions

Thank you for purchasing an EAW quality mount. To keep your customers perfectly satisfied in the future, please carefully read and respect these mounting instructions. Since they include valuable adjustment details, please pass them on to your customer together with the weapon.
This adjustable mount fits on any available Picatinny rails made to STANAG Std. 4694.

1. Mounting the body (Item 1) on the Picatinny rail

1.1 Check the Picatinny rail for correct installation and dirt and clean if necessary to ensure that the clamping faces are free from impurities and lubricant.

1.2 Remove the bridge mount body with the preinstalled ring bottom parts (Item 1 and Item 4) from the packaging foil, place the "... MOA" label at the scope lens end and adjust the position.

1.3 Pick the spacer of the required tilt (0 to 70 MOA) (Items 8 to 15). Remove the previously mounted spacer (Item 8) and the rear ring by unscrewing the bottom internal 6 lobe (ISR) countersunk screw (Item 16) and the two countersunk screws (B) from the ring bottom part. Now trace your steps back to mount the spacer you chose before. Take care to correctly place the spacer connector in the appropriate pocket. Also check that these screws (Item 7 and Item 16) are tightened properly.

1.4 Now put the bridge mount on the right-hand side and tip it up. Make sure that the stop is in one of the Picatinny grooves. To stop the entire mount from moving, push the top part forward while the part is still loosely placed, ensuring that the stop rests on the front lateral face.

1.5 Tighten the clamps (Item 2) using the ISR countersunk screws (Item 3) (see the torques specified on the bill of materials)..

2. Attaching the scope to the roll-off mount

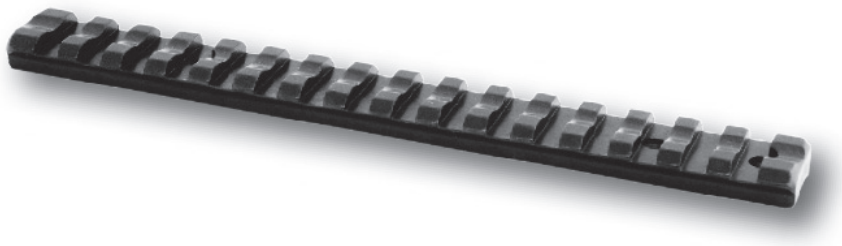

2.1 Choose a scope, place it on the ring bottom parts (Item 4) with the scope pointing towards the muzzle and try the best viewing distance by moving the scope. Please refer to the scope user guide to find the correct distance between your eye and the eyepiece.

2.2 Spread some two-component resin based adhesive across the joining faces of the ring bottom parts (Item 4), then put on the central scope tube in the same place.

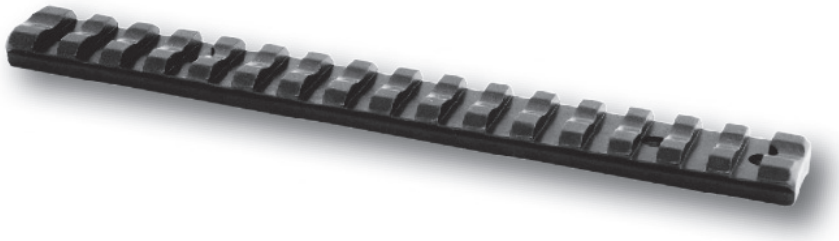

2.3 Remove the ring top parts (Item 5) from the package and spread some adhesive across their inner faces (do read and consider the adhesive manufacturer's instructions!). Place the top on the bottom parts and insert the eight cheese head screws (B) in the beginning of the threads (Item 6). Use the cranked TX20 wrench key from the package and evenly tighten the screws, moving crosswise from one screw to the next. Align the viewing angle horizontally before fully tightening the screws. Wipe off any adhesive escaping from the joint.

2.4 Check that all screws have been tightened properly and apply a little oil to the joint. Allow the bonds to cure properly. Fire a few rounds and check (and readjust) again..

Component Parts, Special Parts and Tools

Our extensive product range includes both professional mounts for any need and application, as well as a clearly organised assortment of replacement parts and practical tools for our mounts for professionals.

Tools

Aligning device for scopes without mounting rail
(EAW Art. No. 22100)

Easy aligning of a scope requiring rings. May be used for both pivot mounts and slide-on/roll-off mounts. Including inserts and fixing parts.

Mounting tool for mounts with rings
(EAW Art. No. 22500)

This set of tools makes it possible to spread the ring halves wide enough to pull them over the middle tube of the scope without scratching the tube.

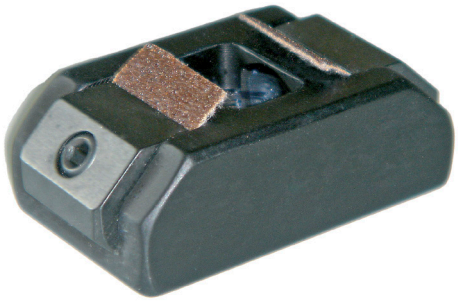

Polisher
(standard: EAW Art. No. 22300 | XS: EAW Art. No. 22400)

Easy and precise polishing of the plane contact surface at the front foot of pivot mounts. Ideal to remove the blueing, or for non-adjustable front bases, e. g. on break-open rifles.

To adapt a second set of tops to the bases, adjust the front base to the front foot that slides in more smoothly, and then use the polisher to retouch the second foot until it fits exactly into the front base.

Polisher
